

WELFARE TECHNOLOGY

welfare technology that can save lives

ViveHome combines smart hardware, sensors and a dedicated family app for a safe, dignified and independent everyday life – with real-time insight and instant alerts for next of kin.

57M+
people living with dementia worldwide

1.3B+
people with significant disabilities (16%)

1 in 5
will develop cancer in their lifetime

90%
of adults 65+ prefer to age at home

THE CHALLENGE

More people need care – and fewer are there to provide it.

More elderly and ill
A growing number of older and chronically ill people, with fewer hands to look after them.

Less capacity
Fewer healthcare workers per capita and fewer places in care institutions.

Digital care
We increasingly rely on digital solutions to look after each other and stay at home longer.

HOW IT WORKS

Help that reaches your family – only when it matters.

01
Wear
The ViveWatch measures heart rate, blood oxygen, temperature and more, around the clock. Blood pressure and temperature monitors are included.

02
Understand
CoLibri collects the measurements, learns what is normal for you and follows trends over time with AI analysis.

03
Alert
When something seems different, you and your loved ones are notified automatically – not all the time, only when it is important.

THE VIVEWATCH SYSTEM

Everything you need, in one box.

The system includes a smartwatch, mobile phone, charging cables, table mount, blood pressure monitor and thermometer, delivered pre-configured for Plug & Play installation.

Blood pressure monitor

Thermometer

Table mount

ViveWatch with mobile phone

The ViveWatch together with a pre-configured ZTE Blade A57 mobile phone – one solution that works both at home and away from home: at the cabin, on holiday or on the go.

€545

No binding period

Campaign: ViveWatch + ZTE phone for approx. €32/month with interest-free instalments (subscription of approx. €16/month included) – approx. €175 discount. EUR prices are approximate (1 EUR ≈ 11 NOK).

THE ECOSYSTEM

Nine modules working together.

01 Mobile phone hub

Intuitive app on the included mobile phone with built-in reminders for medication and daily appointments.

Simplifies everyday life and gives structure.

02 Automatic health measurement

Wireless connection to medical equipment for automatic collection of blood pressure, temperature and more.

Health overview without manual, complicated measurements.

03 Passive activity tracking

Smart room sensors register movement patterns and detect deviations over time – without cameras.

Full privacy and early warning of changes in functional level.

04 Family app

Dedicated mobile app with encrypted access to the user's status, history and system administration.

Safety, overview and continuous real-time insight for the family.

05 Voice on the watch

Direct two-way voice communication from the watch to family via built-in Bluetooth and Wi-Fi.

Call when unwell, in danger – or just to talk to someone.

06 TalkBack

Accessibility feature for blind and visually impaired users. Fully operational on the phone; coming to the watch soon.

Makes the whole ecosystem accessible for users with impaired vision.

07 Smart fall sensor (FSensor)

Accelerometer-based fall detection on the watch with a built-in 17-second cancel function.

Immediate alert on falls; false alarms are cancelled with one tap.

08 SOS button

Dedicated physical button on the watch. Press and hold to trigger an automatic emergency call and alert family.

Maximum safety outdoors or in acute situations at home.

09 Real-time data & battery

Continuous real-time reading of vital health data, with battery life of up to a full week.

Monitoring without daily, cumbersome charging.

CoLibri

INTELLIGENT SOFTWARE FOR NEXT-GENERATION FAMILY FOLLOW-UP

CoLibri is the intelligent software – the "brain" – of the ViveHome ecosystem. It connects the user's smartwatch directly to the family app through advanced data analysis, with statistics, trends and AI analysis on the user's phone, in the family app and in a web dashboard.

HOW COLIBRI WORKS

01 Learns the normal

Maps the user's unique health profile – heart rate, blood oxygen, temperature and blood pressure – over time to establish a stable timeline.

02 Smart deviation alerts

Instead of unnecessary false alarms, the system reacts proactively only when readings suddenly deviate from the user's established normal.

03 24/7 real-time monitoring and emergency alerts

Vital data is monitored continuously, day and night. Dangerous deviations in heart rate or blood pressure – such as signs of cardiac arrest, a critical drop or dangerously high or low blood pressure – trigger an automatic real-time alert to next of kin for immediate help.

HOW IT HELPS THE FAMILY

Complex raw data turned into clear peace of mind.

Real-time insight

Instant access to daily condition, historical health trends and the watch's current battery status.

Precise push alerts

The family is notified immediately of critical events, such as a registered fall (via FSensor) or acute illness.

Constant peace of mind

No constant worry – the system automatically speaks up when something actually needs attention.

FOR HEALTHCARE PROFESSIONALS & INSTITUTIONS

Video consultations and a doctor dashboard

Doctors access the platform through a dedicated app with a fully integrated dashboard, where they can hold video consultations and manage patient flow 100% paperless. ViveHome is a complete, cloud-based ecosystem built for international use, and the module can be tailored to public institutions and private companies worldwide.

- Dedicated doctor app
- Integrated video consultation
- 100% paperless & cloud-based
- Tailored for public & private

ALSO INCLUDED

- **Sleep monitoring** – Scientifically based sleep tracking
- **Call & SMS reminders** – Reminders straight to the phone
- **Multiple languages** – Use the system in your language
- **Support** – Weekdays 9–17

SECURITY & PRIVACY

Security and privacy are the foundation of the ViveHome architecture. The system complies with GDPR, all health data and communication is protected with end-to-end encryption (AES-256), and the hardware is delivered pre-configured for a seamless Plug & Play installation and stable operation from day one.

- GDPR compliant
- AES-256 encryption
- Plug & Play
